

Regarding Approval RA19039  
NE 5-47-10 W4M

### **Leakage Detection Monitoring Requirements**

The purpose of this statement is to outline the water well monitoring requirements in Approval RA19039. Operating condition eight of Approval RA19039 reads:

*“The permit holder shall conduct leak detection monitoring for the swine earthen manure storage, according to a groundwater monitoring system prescribed and authorized in writing, and as amended from time to time where appropriate, by the NRCB.”*

The NRCB has re-assessed the water well monitoring requirements, using results from an environmental risk screening conducted on June 2, 2020 for this confined feeding operation.

Based on the risk screening results, and information submitted with application RA19039 the NRCB has determined that the leakage detection monitoring requirement for this CFO should remain as:

**Monitoring Frequency**

suspended

**Water Well Test Parameters**

suspended

**Water Wells to be used for Monitoring**

suspended

These leakage detection monitoring requirements become effective on the date of this letter and supersede any previously issued monitoring requirements at this facility.
