

Regarding Approval LA21017
SW 18-15-17 W4M

Leak Detection Groundwater Monitoring Requirements

The purpose of this statement is to outline the leak detection groundwater monitoring requirements in Approval LA21017 carried forward from Approval LA10032M. Operating condition #7 of Approval LA21017 reads:

“The owner/operator shall conduct leak detection monitoring for the catch basin, according to groundwater monitoring system prescribed and authorized in writing, and as amended from time to time where appropriate, by the NRCB.”

On September 29, 2010, the NRCB issued a monitoring statement, suspending groundwater monitoring. Due to the change in permit and condition numbers for Approval LA21017, I am re-issuing the monitoring statement with the relevant changes.

Therefore, the groundwater monitoring requirements for this CFO shall be as follows:

Monitoring Frequency

Groundwater monitoring requirements are suspended.

Monitoring Well Test Parameters

Not applicable, as monitoring is suspended

Monitoring Wells to be used for Monitoring

Not applicable, as monitoring is suspended

To ensure that monitoring requirements are appropriate, CFO operators should inform the NRCB of any new water wells that are being developed or installed in the area surrounding their facility.

The integrity of all monitoring wells must be maintained. Any damaged or destroyed wells must be reported to the NRCB and may be required to be repaired or replaced.

These monitoring requirements become effective on the date of this letter and supersede any previously issued monitoring requirements at this facility.
