

Regarding Approval RA25028
NW-03-43-26-W4

Water Well Monitoring Requirements

The purpose of this statement is to outline the water well monitoring requirements in Approval RA25028. Operating Condition 4 of Approval RA25028 reads:

“The permit holder shall sample and test raw groundwater on an annual basis according to the water well monitoring requirements prescribed by the NRCB in writing (“Sampling for Water Well Monitoring” Fact Sheet). The NRCB may, based on the monitoring results and at its discretion, revise those requirements in writing. (See Water Well Monitoring Requirements)”

The NRCB has re-assessed the water well monitoring requirements, using results from a water well exemption screening conducted on June 20, 2025, for this confined feeding operation.

Based on the screening results, the NRCB has determined that the water well monitoring requirements for this facility should be as follows:

Monitoring Frequency

Annually, with results submitted to the NRCB by July 31 of each year

Water Well Test Parameters

Chlorides and nitrate-nitrogen

Water Wells to be used for Monitoring

WW IDs 40151 and 277279

These monitoring requirements become effective on the date of this statement and supersede any previously issued monitoring requirements at this facility.

July 7, 2025
