Water Well Monitoring Requirements

The purpose of this statement is to outline the water well monitoring requirements in Approval LA25041. Operating Condition #8 of Approval LA25041 reads:

“The permit holder shall sample and test raw groundwater from any wells within 100 m of a CFO facility and the water well located north of the feedlot pens (as indicated in Technical Document LA25041) according to water well monitoring requirements prescribed by the NRCB in writing. The NRCB may, based on the monitoring results and at its discretion, revise those requirements from time to time, in writing.”

The NRCB has re-assessed the water well monitoring requirements, using results from an environmental risk screening conducted in September 2025 for this confined feeding operation.

Based on the risk screening results, and new information submitted with Approval LA25041, the NRCB has determined that the water well monitoring requirements for this facility should be amended as follows:

Monitoring Frequency

Annually, with results submitted to the NRCB by July 31 of each year

Water Well Test Parameters

Chlorides and nitrate-nitrogen

Water Wells to be used for Monitoring

The well north of the feedlot pens (unknown ID) and any other well within 100 m of a CFO facility

These monitoring requirements become effective on the date of this letter and supersede any previously issued monitoring requirements at this facility.

Date: September 17, 2025
